

WEEK 3 REPORT

In this week we learnt more about React and Javascript along with HTML and CSS with the help of tutorials and videos.

Since we are all making ourselves familiar with react due to the whole clone being in react, we are making sure that we polish our skills to aid us in the production of the website.

We have divided the website into parts based on the front-end part and have distributed evenly the work which we will begin as soon as possible once we finish learning the basics. After which we will learn and work simultaneously.

The learning pace is different for all of us hence we are working at our own pace on our own assigned work which we mutually agreed on.
